

Modern Age Coders

Every answer below is taken from the live website and its brand source-of-truth file, not written from memory. The numbering matches your form exactly. Sections B and C are the constraints that decide whether a creative can actually run, so please read them before the first draft.

29 August 2026 learn.modernagecoders.com Platform: Meta (Facebook + Instagram)

A Business details

1 Business Name

Modern Age Coders

Registered legal name, for fine print or Meta business verification: **Modern Age Coders Education**. Use the short brand name in all creative. Never abbreviate it to "MAC".

2 Product / Service

Live online coding and maths classes, taught by real mentors, for ages 6 to 67.

Not recorded videos and not an app. Every class is live and scheduled. Three ways to join:

- **Group** — live batch, two classes a week
- **Mini batch** — near one-to-one attention, two classes a week
- **One-to-one** — fully private, custom curriculum

The catalogue is 122 courses: Python, AI and machine learning, Java, C++, web development, game development, AI coding agents, school board preparation (CBSE and ICSE), and maths from abacus through competitive exam levels.

There is also a separate business-to-business software services arm on the site. Please leave it out of these ads entirely, it is a completely different buyer.

3 Key Highlight

Listed in priority order. Lead with the first one or two, treat the rest as support.

- **Maths and code, taught together.** The site's own line is "Maths + Code, Made for Each Other." Almost no competitor teaches both. This is the single most ownable thing about the brand.
- **Live human mentors, never recordings.** Real teachers, small live batches, students can interrupt and ask questions.
- **Ages 6 to 67.** Kids, teens, college students, working adults, retirees. Genuinely unusual, and it makes an adult-facing ad set legitimate rather than off-brand.
- **A free demo class before you pay.** The entire funnel is built around this. It is the conversion hook.
- **Rated 4.9 across 547 Google reviews.** Families in 25+ countries. Teaching since 2020. Over 10,000 students taught.
- **Students build real, working projects** and finish with a certificate.

4 Colour Theme

The brand system is called **Ledger & Proof**: warm paper, dark ink, amber accent. Warm and hand-made, like good print. These are the exact live values, and this document uses them, so you can colour-pick it directly.

 Paper, background #FBF8F2	 Paper 2, panels #F4EEE3	 Ink, all text #1C1814
 Muted, secondary #6B6259	 Amber, accent #B45309	 Amber bright, CTA #D97706

Fonts, all free on Google Fonts: **Fraunces** for headlines, **Inter** for body and interface text, **JetBrains Mono** for anything that should read as code or data.

PLEASE DO

Flat warm colour. Paper texture. A letterpress, printed feel. Real photographs of real people. Clean line icons drawn as SVG.

PLEASE NEVER

Purple `#a855f7` or cyan `#06b6d4`. Gradients, glows, neon, dark "techy" backgrounds, 3D robots, circuit boards. The owner rejects this on sight as the "AI look".

5 Offer / Discount

A free demo class. There is no discount, no percentage off, no countdown.

This is deliberate. The brand sells on teaching depth and quality, not on being the cheapest, so please do not add invented urgency devices such as "50% OFF", "ONLY 3 SEATS LEFT" or expiring timers. They are off-brand, and none of them are true.

The one honest scarcity you may use is that live batches have limited seats and start on fixed dates. The offer lands on the Book a Free Demo page.

6 Price (Starting / Fixed)

India, per month, per student:

PLAN	PRICE	WORKS OUT TO
Group	₹1,499 / month	₹187 a class
Mini batch	₹2,999 / month	₹375 a class
One-to-one	₹4,999 / month	₹1,250 a class

Outside India, per month, per student:

PLAN	PRICE	WORKS OUT TO
Group	\$100 / month	\$12.50 a class
One-to-one	\$150 / month	\$18.75 a class

Mini batch is not sold outside India, so please do not show it on international creative.

Holiday camps are a one-time fee of ₹9,999 or \$200, not monthly.

If you want one starting price for a headline, use **"from ₹1,499 a month"** or **"from \$100 a month"**. Never both together. See rule B1.

7 Company Logo

Three formats are supplied alongside this brief:

- `Logo.svg` — vector, please use this one for anything you design
- `Logo.png` — 512 × 512 raster fallback
- `Logo.webp` — web fallback

The mark is a **blue rounded square containing white curly braces** around a white node graphic.

Important: the logo blue is `#007bff` and it is not part of the brand palette. It is the one permitted exception. Please do not pull that blue out of the logo and build the creative around it. The layout palette stays amber and ink, as in field 4.

8 Inspiration Images

The website is the reference. Please look at these four pages before designing anything:

- **learn.modernagecoders.com** — the homepage, and the definitive look
- **/pricing** — how price is presented on-brand
- **/how-we-teach** — real classroom footage, the honest visual tone
- **/courses** — the locked course-poster style

Two internal documents are supplied with this brief and are worth more than any moodboard: the **brand social kit**, which holds the existing rules for social creative, and the **Ledger & Proof brand guidelines PDF**, which is the full design system.

The course thumbnails on the courses page follow a locked letterpress-poster treatment: flat colour, no gradients, no glows. That is the closest existing thing to an ad creative, so please treat it as the house style.

9 Contact Info

Phone and WhatsApp +91 91233 66161
Email contact@modernagecoders.com
WhatsApp link wa.me/919123366161

WhatsApp is the primary response channel and converts best in India, so it is worth featuring on the creative. It is also worth testing Click-to-WhatsApp as a campaign objective.

10 Full Address

Modern Age Coders Education
1B, JK Ambika Tower
Kolkata, West Bengal 700002
India

Please reproduce this string character for character. It has to stay identical across the website, the Google Business Profile and every ad account, because inconsistent address strings measurably hurt local search ranking. Please do not reformat it, abbreviate it, or add a landmark.

All classes are online. This is the registered office and not a campus, so please avoid "visit us" or "near you" language.

11 Website / Social Links

<https://learn.modernagecoders.com>

- Facebook — facebook.com/modernagecoders
- Instagram — instagram.com/modern_age_coders
- YouTube — youtube.com/@ModernAgeCoders
- LinkedIn — linkedin.com/in/shivam-khemka-modern-age-coders (founder)
- GitHub — github.com/modernagecoder
- Google Business Profile — g.page/r/Cff_QkHNp9yEAE (the 4.9 rating and 547 reviews are live here)

Please note the domain is **learn.modernagecoders.com**, not **www**. Send all ad traffic to the [Learn.](#) subdomain.

12 Special Instructions to designing team

The four hard rules are in section B and they are the ones most likely to be broken by default, so please read them first. Three smaller notes:

- **No em dashes in ad copy.** The owner reads them as a sign that copy was written by AI. Please use a comma, a full stop or brackets instead.
- **Target adults, never children.** Meta audiences should be 25 to 55 and parent-focused, plus a separate 18+ set for the adult and professional courses. The creative speaks to the parent or the adult learner, never to the child.
- **Real people over stock.** Real students and real classroom screenshots will outperform stock imagery here and they fit the brand. Please ask us for assets rather than buying stock photography.

B Four rules that are not negotiable

Each of these has cost the business something before. A creative that breaks one of them cannot go live, however good it looks.

RULE B1

One currency per creative. Never both.

An India ad set carries rupees only. An international ad set carries dollars only. No creative ever shows ₹ and \$ together, and no creative shows a converted “approximately” price.

This is a targeting instruction rather than a styling preference. The website detects the visitor's region and shows one price list automatically, so a creative showing both prices contradicts the page it clicks through to, and the lead is lost at exactly the moment the parent was ready to act.

RULE B2

Lead with the teaching. Price is the closer, not the hook.

The instinct on an education account is “₹1,499, enrol now”. That is the wrong ad for this brand and it attracts the wrong parent.

Open with the substance instead: live mentors, maths and code together, ages 6 to 67, real projects, the free demo. Price appears late in the creative as reassurance that the quality is affordable, or it does not appear at all. Please never open on the number.

RULE B3

The review line has one permitted wording.

Use exactly this: **“Rated 4.9 across 547 Google reviews”**.

Please do not write “rated 4.9 by 10,000+ students”, do not round 547 up, do not restate the review count as a student count, and do not turn it into “number one” or “best rated”. The 4.9 and the 547 are both verifiable on the Google Business Profile. Anything else is a claim the business cannot defend if challenged. The 10,000+ figure is students taught, which is a separate and correct claim on its own.

RULE B4

Do not put a batch size number on any creative yet.

Please say “small live batches” or “near one-to-one attention” instead. Do not print a specific number of students.

The website currently carries several different group sizes in different places, and a parent will hold an advertised number to what they find in the actual classroom. Section C flags this for the owner to settle. Once there is one agreed number, it can go on the creative.

c To settle before spend starts

Neither of these blocks the design work. Both block the campaign being measurable or accurate, so they are worth clearing in the same week.

BLOCKING, OWNER ACTION

The Meta Pixel is not installed. Nothing is tracking.

The tracking file ships on every page of the site, but its Pixel ID is still the placeholder value, so the script exits immediately and fires nothing. There is no Pixel, no Lead event and no Conversions API.

If ads launch in this state, every rupee of spend is unattributable, and Meta's optimisation has no conversion signal to learn from, which also makes the ads more expensive than they need to be. **To fix:** create the Pixel in Meta Events Manager, add the ID to the site's tracking file, add a Lead event on the demo form submission, and give the agency access to the Pixel and the ad account.

NEEDS A DECISION

Group batch size is currently stated four different ways.

The brand facts file says 5 to 8 students. The pricing page says "up to 10" on the plan cards and "maximum 6 to 8" in its comparison table. The board preparation pages say 10 to 15, which was set deliberately for that series. Mini batch is 3 to 4 nearly everywhere, but 4 to 5 on the board preparation pages.

These cannot all be true of the same product. Once the real number for a standard group class is chosen, the creative can state it with confidence. Until then, rule B4 applies.
